

Process to follow when running the website successfully.

STEPS:

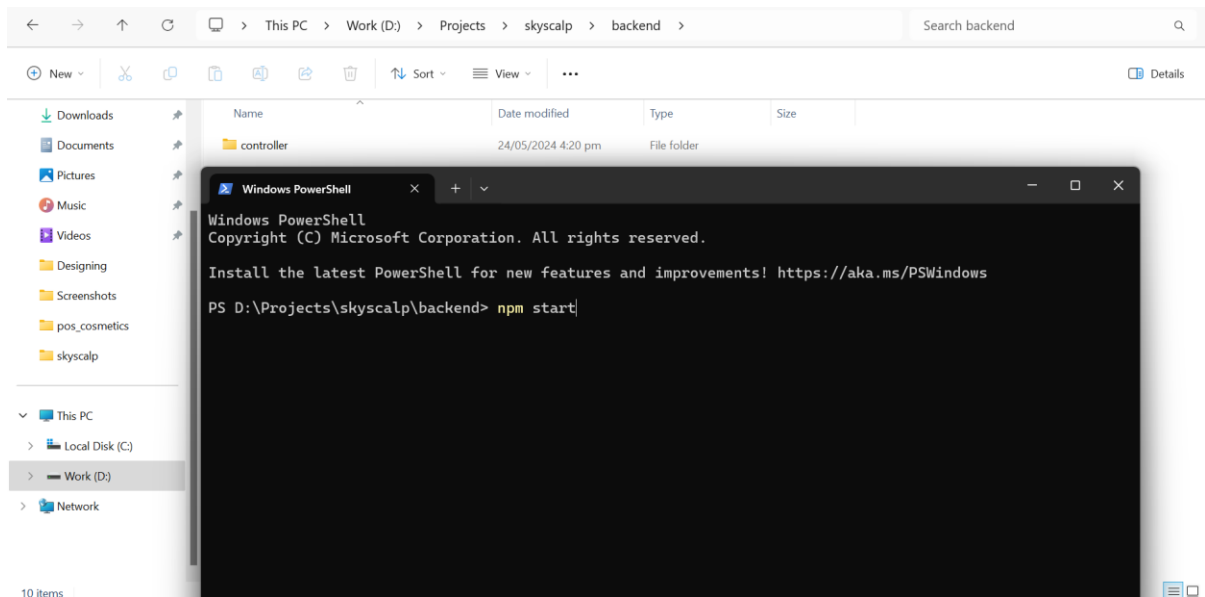

1. Download and install Nodejs
2. Open github repository link and download the code as zip

- 3.
4. After the successful download, Open backend folder and open terminal in same folder.

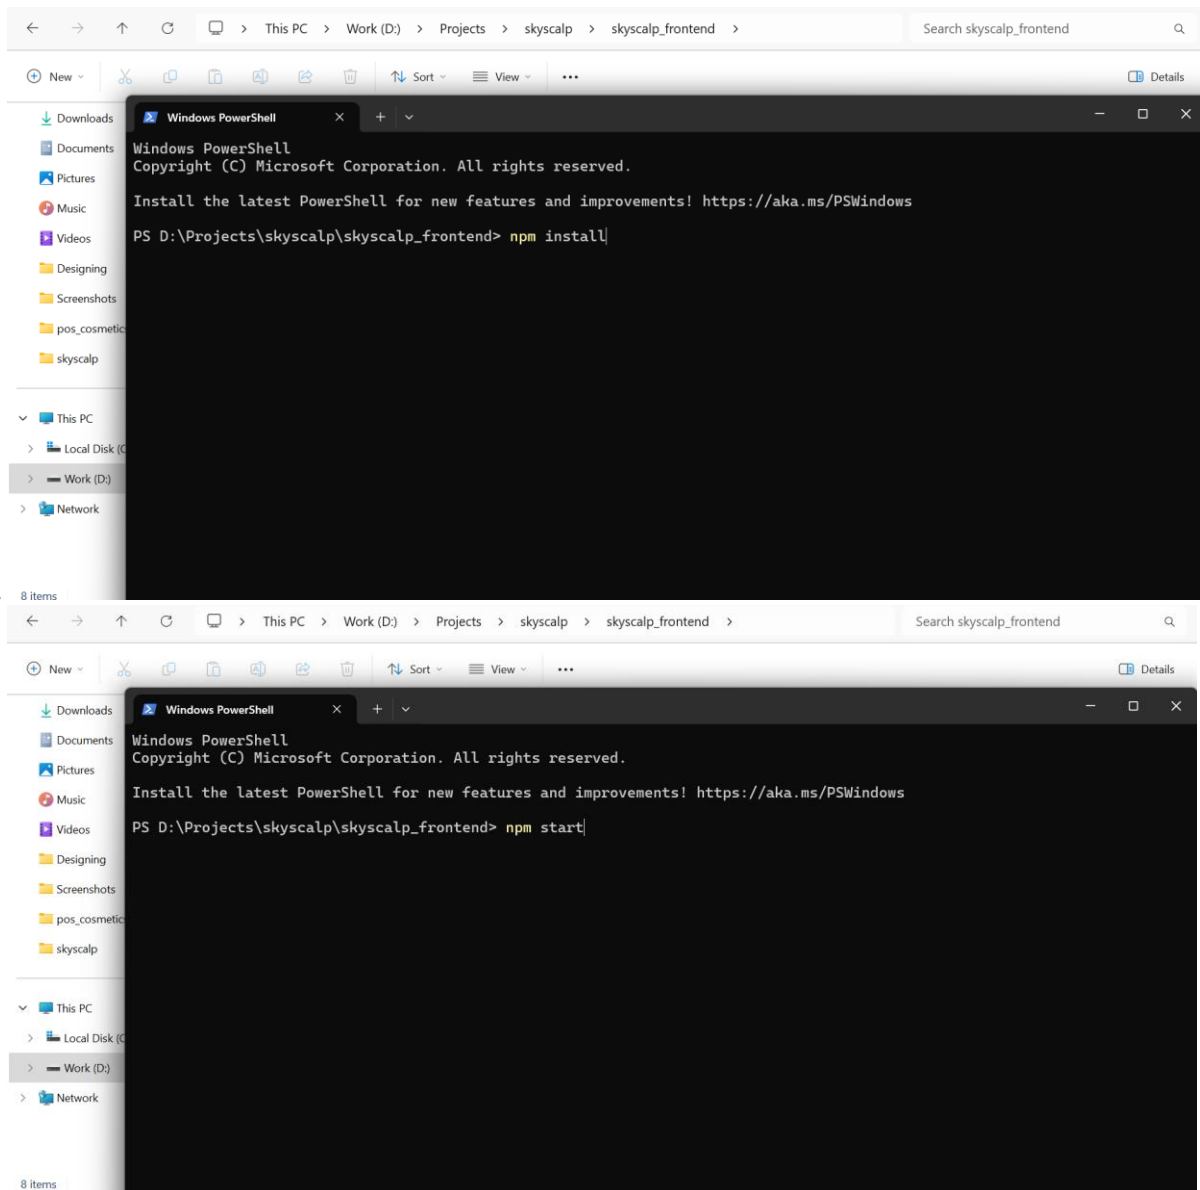

- 5.
6. Run command “npm install”, after successful completion run another command “npm start”

- 7.
8. Now the backend server is started.
9. Now proceed to the folder named “skyscalp_frontend”, and open terminal here.
10. Run command “npm install” and after completion run “npm start”.

11.

12. After completing these steps successfully, The link with localhost:3000 will be opened in browser

NOTE:

Admin credentials:

Url: <http://localhost:3000/admin/dashboard>

email: admin@skyscalp.com

Password: 123123

Once you log in with this credentials you will be redirected to super admin.

If you create other account and log in you will be redirected to user admin.

I hope this will clear the setup process of website, if you have any objection feel free to ask.
